WebAuthN module for SATOSA

- Standalone registration page removed temporarily
- UI improved
- The module and microservice uploaded to git
- Triggering of WebAuthn module fixed
- Main functionality of the module finished
- Configurable "turn off authentication" created

Conflict compatibility

- New configuration parameter added

```
#parameter that is used to determine what to do if there is a conflict in MFA required by the SP
#conflict_compatibility == True
#  config requires MFA but SP request requires SFA -> perform MFA but return that SFA took place
#conflict_compatibility == False
#  config requires MFA but SP request requires SFA -> fail
conflict_compatibility: True
```

Source: webauthn.guide

TODO

- Standalone registration page
- More systems connected to the same module

GÉANT

Thank you
